Proving (continued) Option 1 Sequence of Operation 1. The LMV3 is in standby. All valves are closed and all relay contacts are as shown in the electrical schematic. 2. The LMV3 receives a call for heat. The SV terminal (X6-03.3) energizes with the blower, energizing the PVLT (Pilot Valve Leak Test). Page 210 Technical Instructions LMV Series Document No. LV3-1000 Pilot Valve Proving (continued) Option 2: On Startup, SKP25 on the Main Gas Train, Solenoid Valves on the Pilot Train Figure 9: Option 2 Piping and Electrical Schematics Appendix A Page 18 SCC Inc. Page 211 LMV Series Technical Instructions Document No. LV3-1000 Pilot Valve Proving (continued) Option 2 Sequence of Operation 1. The LMV3 is in standby. All valves are closed and all relay contacts are as shown in the electrical schematic. 2. The LMV3 receives a call for heat. The SV terminal (X6-03.3) energizes with the blower, energizing the PVLT (Pilot Valve Leak Test). Page 212 Technical Instructions LMV Series Document No. LV3-1000 Pilot Valve Proving (continued) Option 3: Pilot Valve Proving on Startup and Main Valve Proving on Shutdown Figure 10: Option 3 Piping and Electrical Schematics Appendix A Page 20 SCC Inc. Page 213 LMV Series Technical Instructions Document No. LV3-1000 Pilot Valve Proving (continued) Option 3 Sequence of Operation 1. The LMV3 is in standby. All valves are closed and all relay contacts are as shown in the electrical schematic. Main gas valve V1 terminal X8-02.1 is effectively connected to PV1, and main gas valve V2 terminal X7-01.3 is effectively connected to PV2. Page 214 Technical Instructions LMV Series Document No. LV3-1000 Purge Proving Introduction Purge proving verifies either a differential air pressure switch or an air damper end switch is in the correct position before purge begins. This can be accomplished in two different ways: •... Page 215 LMV Series Technical Instructions Document No. LV3-1000 Purge Proving (continued) 2. Set parameter 211 (fan run-up time) approximately 5 seconds longer than the amount of time that it takes for the proving switch to close after the fan turns on at the beginning of phase 22. Page 216 Technical Instructions LMV Series Document No. LV3-1000 Revert to Pilot - LMV37 only Introduction Revert to pilot is a feature on the LMV37 that allows the burner to re-light the pilot and close the main gas valves (V1 and V2). This is done for two key reasons: •... Page 217 Revert to Pilot - LMV37 only (continued) 2. Set the following parameters in the RWF55 controller. For more information, obtain Siemens Document No. U7867 for the RWF55 at [www.scccombustion.com](http://www.scccombustion.com). Conf > Cntr > CYP = 2 Conf > Cntr > SPL = setpoint range lower limit Conf >... Page 218 Technical Instructions LMV Series Document No. LV3-1000 Revert to Pilot - LMV37 only (continued) 7. Once the ignition position has been reached, the LMV37 pauses for the length of interval 2 - main stabilization (phase 65). 8. After the interval 2 time has expired, both the ignition transformer and pilot valve are energized for the length of safety time 1 (phase 66). Page 219 LMV Series Technical Instructions Document No. LV3-1000 Revert to Pilot - LMV37 only (continued) Operation Example Critical RWF55 settings for operation example: Opr > SP1 = 90 PArA > HYS1 = -4 PArA > HYS3 = 8 ConF > AF > AL = 3 ConF >... Page 220 Technical Instructions LMV Series Document No. LV3-1000 Revert to Pilot - LMV37 only (continued) Important Notes 1. When the "revert to pilot" function is enabled, float / bump load control via terminal X5-03 is no longer possible. Input X5-03.3 is no longer used and input X5-03.2 is re- purposed as the input signal for the "revert to pilot"... Page 221 LMV Series Technical Instructions Document No. LV3-1000 Stack Damper Introduction In some applications, a stack damper is used to prevent a draft from coming into the boiler when the boiler is shut down. However, the stack damper needs to be open during boiler operation. Page 222 Technical Instructions LMV Series Document No. LV3-1000 Stack Damper (continued) Operation 1. When there is no call for heat from the RWF5x load controller, the internal contact between terminals 1N and 1P will be open. Both CR-1 and CR-2 coils will be de- energized, and the stack damper will be closed. Page 223 Intentionally Left Blank ...
